# Village of Worth

## 1.0 Overview

### 1.1 Introduction

The Lead Service Line Replacement and Notification Act (Act), State of Illinois Public Act 102-0613, went into effect on January 1, 2022. This Act required that every owner or operator of a community water supply (CWS) that has known or suspected lead service lines (LSLs) create a plan to replace each lead and galvanized service line (if connected downstream of lead piping); submit that initial plan to the Illinois Environmental Protection Agency (Agency) by April 15th, 2024; submit by April 15th of each year after 2024 until 2027 an updated lead service line replacement plan to the Agency; and submit by April 15th, 2027 a final lead service line replacement plan to the Agency. The Act also requires that the plan is posted on the community water supply's website.

The Act also requires that the plan is posted on the community water supply's website. This Plan will be available on the Village's website until April 15, 2025, at which time it will be replaced with an updated Plan.

The Village of Worth has prepared an initial Lead Service Line Replacement Plan (Plan) in compliance with the Act and its requirements. The Plan includes the name and identification number of the CWS; an inventory of the total service lines, known and suspected LSLs, and LSLs that have been replaced since 2020; a proposed replacement schedule; a cost analysis with financing options; a prioritization plan; community outreach measures; and workforce development measures.

## 2.0 Background Information

### 2.1 Location

The Village of Worth is located in the southwest suburban Cook County. The Village is bounded by Chicago Ridge to the north, The Village of Alsip to the east, The City of Palos Hills to the west, and The City of Palos Heights to the south. The Village corporate boundaries encompass an area of approximately 2.38 square miles.

### 2.2 Community Water Supply (CWS)

The Community Water Supply (CWS) is named Worth and is IEPA Water System No. IL0313360. The CWS serves a population of 10,970 and has 2,817 service connections as reported to the IEPA and posted to Illinois.gov under the Illinois Drinking Water Watch.

The CWS takes ownership of the service line extending from the water main to the water shut-off valve or Buffalo Box (b-box)/curb stop while the property owner takes ownership of the service line from the water shut-off valve or Buffalo Box (b-box)/curb stop according to the Village's Code of Ordinances, listed in Appendix 1.

## 3.0 Lead Service Line Inventory (LSLI)

### 3.1 Summary

The definitions of water service line materials in the CWS's inventory adheres to the definitions provided by the Illinois EPA. These definitions are outlined in the table below.

Service Line Material
Copper – No Lead Solder (C)
Galvanized Requiring Replacement (GRR)
Lead (L)
Cast/Ductile Iron (O)
Unknown (U)

Unknown Not Lead (UNL)

The CWS has completed its inventory. These efforts included those listed below: reviewing resident surveys, water meter replacement records, a property’s building age, exploratory excavations at targeted locations, visual inspection of interior service lines, and as replacements and repairs are conducted.

- The service lines are assumed to be non-lead on both the public and private sides.
- Historical Records: Where available, historical records were used to identify service line material. Historical records could include water meter replacement records, water main replacement records, water main tapping cards, water meter cards, permit records, and documentation from maintenance and repairs.
- Visual Identification: The CWS staff recorded service line material when entering private property.
- Resident-Provided Photos: The CWS distributed a survey in which residents could provide photos. Photos were submitted by residents to assist with the inventory.
- Excavations: Crews have located service lines during repairs as well has hydro-excavated to view lines on the public-side service side.
- Future Surveying: To date all water services have been inventoried. Homes

The current inventory includes:

- The total number of services lines in the CWS for the current year;
- The material composition of each service line in the CWS’s distribution system;
- The count of suspected lead service lines identified since the last inventory submission;
- The number of suspected or known lead service lines replaced since the last inventory submission

A copy of the inventory submitted to the Agency that lists the total number of service line connections, total LSLs, and total suspected LSLs is included in Appendix 2. A map of the building ages in the CWS is included in Appendix 3. Buildings built prior to 1970 have a higher probability of having a lead service.

Service Material	# of Services		
	Private	Public	Entire Service Line
Lead (L)	1 partial segment	0	0
Unknown or Suspected Lead (U)	0	0	0
Galvanized Requiring Replacement (GRR)	0	0	0
Not Lead	2818	2819	0

### 3.2 Previous Replacements

The CWS had found one service. The line was replaced in coordination with homeowner on both sides, pubic and private. The repair was made June 2020.

## 4.0 Funding Considerations

The CWS will absorb replacement cost due to the one segment of lead service line connections detected during the lead service line inventory. This replacement would be to classify CWS as a non-lead community.

### 4.1 Financial Plan

The CWS will budget and plan using village funds for replacement due to the one lead service segment. The CWS financial plan, will request three proposals as access to the last remaining service is granted.

#### Prioritization

The CWS has complied with the mandated replacement requirements. The CWS is attempting to replace the segment inventoried on one service (private side).

## 5.0

### 5.1 Risk Factors

The CWS has prioritized one replacement. The CWS has historically had no lead service lines with the exception of a partial segment that was found upon inspection.

## 6.0 Lead Service Line Replacement (LSLR)

### 6.1 Scope of LSLR

The work shall consist of the removal and replacement of lead specified service area. The area will be determined based on prioritization, material, building age, and funding limits, but all will be within the corporate boundaries of the CWS. New copper service lines shall be installed for full and partial lead service line replacement. Full lead service line replacement shall be defined as from the water main to inside the building.

Partial service line replacement shall be defined as connecting from the curb box (B-box or buffalo box) to the water main. No lead piping will be left in the water system. Partial replacements will only occur where the existing service is partially lead or galvanized. Cross-sectional replacement details are included in Appendix 5.

### 6.2 Replacement Methods

The methods of installing the new service are described below. To minimize impacts to residential property and to reduce restoration, trenchless methods are preferred.

**Open cut:** Open cut trenching is the typical method used by plumbers, especially for properties slated for demolition and replacement. It involves digging a trench, which can cause significant exterior disruption to property owners. Interior disturbances depend on whether the basement is finished. Despite its disturbance, open cut trenching is often the most cost-effective option, particularly when restoration costs are minimal. This approach is only advised based on individual circumstances.

**Trenchless:** Trenchless installation of water services is being explored to address concerns such as economic impact, landscape disruption, and social inconveniences associated with traditional open cut methods. Advances in trenchless technologies offer a more efficient alternative in certain situations, minimizing surface disruption and restoration time. These methods are socially appealing as they cause less destruction and require less restoration compared to open cut techniques.

**Standard Horizontal Directional Drilling:** Standard Horizontal Directional Drilling (HDD) involves using a drill rig on the ground surface to create a tunnel underground. To reach a depth of about 5'6" below the ground surface, the drill rig head must be positioned approximately 30 feet away from the final depth point of the water service. This may require closing the road for safety. While many pipeline and cable contractors employ this method, plumbing contractors often subcontract it out as specialty work.

**Pipe pulling:** Pipe pulling is the most cost-effective method among trenchless options for installing water services. It involves using the path of the existing pipe, eliminating the need for additional excavation. A new water service pipe is pulled along the existing route, often with a winch or excavator bucket with a cable. The new copper service is connected to the existing lead service in the home, effectively replacing it using the borehole left by the removed lead pipe.

The connection to the water main typically incorporates the use of a tapping sleeve and is done by a licensed plumber. The licensed plumber also connects the new service line to the existing water meter inside the house according to the State of Illinois plumbing code.

Prior to completion of the work, the Contractor shall provide each address that received a new service line with a Point of Use water filter that meets both NSF/ANSI 42 and 53 certifications for lead reduction with a minimum capacity of 0.5 gallons and six months of replacement cartridges or a minimum of 150 gallons of filtration capacity. The filter shall not be a permanent faucet filter. The Contractor shall have the resident provide a signature to acknowledge receipt of the filter on a form provided by the Village. The form shall be turned in with other documentation.

Prior to beginning the work of connecting the new service inside the house, the water supply to the service line and the property owner shall be shut off to avoid release of particulate lead into the property owner's premises. After all connections have been completed, the Contractor shall flush the water from an outside connection (such as a hose bibb or hose leading from the building side of the meter) to remove any particles in the service line. Flush at full velocity for at least 30 minutes. The Contractor shall then advise the property owner to flush the interior premise plumbing in accordance with the instructions

provided in the Owner-provided informational material. This work shall be conducted in accordance with AWWA C810-17 – Replacement and Flushing of Lead Service Lines.

The Village will use these standards when performing lead service line replacement:

Item	Condition
1. Restoration of Interior and Exterior	Meet existing condition or better
2. Parkway/Yard Restoration	Sod, Seed in Summer
3. Field Locate B-boxes	Location by Village
4. Trench backfill	CA-7
5. Verify B-box operation at Project Completion – after surface restoration	B-boxes keyed by Village
6. Street Cross Sections	Minimum 6-inch pavement patching
7. Work Hours	Monday to Friday 7 am to 7 pm Saturday 8 am to 7 pm No Work Sunday or Holidays, except Contractor may schedule meeting or inspection on Sunday.
8. Meter Pits	Village will be consulted prior to relocating meter to building interior and abandoning the meter pit. Contingency Pay Item for this work included in contract.
9. B-box	Mueller H-10302, Minneapolis Pattern or approved equal
10. Curb stop	Mueller Ball Style: H15150 or approved equal
11. Corp Stop	Mueller H-15000 or approved equal
12. Saddle for corp stop	Smith-Blair or Ford Repair Clamp
13. Abandon existing Lead Service Line	Cap.

### 6.3 Completed LSLR

The CWS has not completed any lead service line replacement project since 2020.

## 7.0 Workforce Development

In performing projects associated with the Lead Service Line Replacement initiative, the CWS plans to develop the workforce available to perform these projects. These developmental practices include:

**Smaller bids:** The CWS will break the required replacements into smaller projects within the CWS, so that the bids will be smaller and more attainable for smaller firms.

**College engagement:** The CWS will engage with local colleges and institutions to train new individuals entering the workforce.

**Hiring local:** The CWS will include a clause within the scope of work for interior work and inspections to be conducted by local contractors who have an understanding of the community.

Experience contractor teaching: An experienced contractor teaches a smaller contractor how to perform the work.

Diversity in hiring practices are another aspect to workforce development and would include contacting all local MBE and WBE contractor associations during bidding.

The Contractor shall also take the following specific affirmative action to ensure equal employment opportunity:

- Ensure and maintain a working environment free of harassment, intimidation, and coercion at all sites, and in all facilities at which the Contractor's employees are assigned to work. The Contractor, where possible, will assign two or more women to each construction project. The Contractor shall specifically ensure that all foremen, superintendents, and other on-site supervisory personnel are aware of and carry out the Contractor's obligation to maintain such a working environment, with specific attention to minority or female individuals working at such sites or in such facilities.
- Establish and maintain a current list of minority and female recruitment sources, provide written notification to minority and female recruitment sources and to community organizations when the Contractor or its unions have employment opportunities available, and maintain a record of the organizations' responses.
- Maintain a current file of the names, addresses and telephone numbers of each minority and female off-the-street applicant and minority or female referral from a union, a recruitment source or community organization and of what action was taken with respect to each such individual. If such individual was sent to the union hiring hall for referral and was not referred back to the Contractor by the union or, if referred, not employed by the Contractor, this shall be documented in the file with the reason; therefore, along with whatever additional actions the Contractor may have taken.
- Provide immediate written notification to the Director when the union or unions with which the Contractor has a collective bargaining agreement has not referred to the Contractor a minority person or woman sent by the Contractor, or when the Contractor has other information that the union referral process has impeded the Contractor's efforts to meet its obligations.
- Develop on-the-job training opportunities and/or participate in training programs for the area which expressly include minorities and women, including upgrading programs and apprenticeship and trainee programs relevant to the Contractor's employment needs, especially those programs funded or approved by the Department of Labor.
- Disseminate the Contractor's EEO policy by providing notice of the policy to unions and training programs and requesting their cooperation in assisting the Contractor in meeting its EEO obligations; by including it in any policy manual and collective bargaining agreement; by publicizing it in the company newspaper, annual report, etc.; by specific review of the policy with all management personnel and with all minority and female employees at least once a year; and by posting the company EEO policy on bulletin boards accessible to all employees at each location where construction work is performed.
- Review, at least annually, the company's EEO policy and affirmative action obligations under these specifications with all employees having any responsibility for hiring, assignment, layoff, termination, or other employment decisions including specific review of these items with onsite supervisory personnel such as Superintendents, General Foremen, etc., prior to the initiation of construction work at any job site. A written record shall be made and maintained identifying the time and place of these meetings, persons attending, subject matter discussed, and disposition of the subject matter.
- Disseminate the Contractor's EEO policy externally by including it in any advertising in the news media, specifically including minority and female news media, and providing written notification to and discussing the Contractor's EEO policy with other Contractors and Subcontractors with whom the Contractor does or anticipates doing business.
- Direct its recruitment efforts, both oral and written, to minority, female and community organizations, to schools with minority and female students and to minority and female recruitment and training organizations serving the Contractor's recruitment area and employment needs. Not later than one month prior to the date for the acceptance of applications for apprenticeship or other training by any recruitment source, the Contractor shall send written notification to organizations such as the above, describing the openings, screening procedures, and tests to be used in the selection process.

- Encourage present minority and female employees to recruit other minority persons and women and, where reasonable, provide after school, summer and vacation employment to minority and female youth both on the site and in other areas of a contractor's work force.
- Validate all tests and other selection requirements where there is an obligation to do so under 41 CFR Part 60-3.
- Conduct, at least annually, an inventory and evaluation at least of all minority and female personnel for promotional opportunities and encourage these employees to seek or to prepare for, through appropriate training, etc., such opportunities.
- Ensure that seniority practices, job classifications, work assignments and other personnel practices, do not have a discriminatory effect by continually monitoring all personnel and employment related activities to ensure that the EEO policy and the Contractor's obligations under these specifications are being carried out.
- Ensure that all facilities and company activities are non-segregated except that separate or single-user toilet and necessary changing facilities shall be provided to assure privacy between the sexes.
- Document and maintain a record of all solicitations of offers for subcontracts from minority and female construction contractors and suppliers, including circulation of solicitations to minority and female contractor associations and other business associations.
- Conduct a review, at least annually, of all supervisors' adherence to and performance under the Contractor's EEO policies and affirmative action obligations.

## 8.0 Resident Communication and Outreach

To ensure effective community engagement, the CWS's outreach program for the Lead Service Line Replacement (LSLR) initiative will employ various communication methods aimed at informing and involving homeowners that have not responded to the inspection process.

The CWS will direct mail required printed information for the remaining service's listed "unknown." In addition the CWS will continue use of flyers, door hangers and direct mail distributed to households.

Non-Participation/Waivers: Homeowners in the CWS may not always be ready to engage with or communicate regarding the inspection process of LSLR program. At present, the CWS lacks the authority to mandate homeowner access to private property or demand access for replacing the private side of the LSL. For those who choose not to participate, an Illinois Department of Public Health waiver form will be available. Efforts to communicate will be recorded for unresponsive homeowners.

## CHAPTER 4 WATER AND WASTEWATER SERVICE RATES AND CHARGES

SECTION:

**7-4-1: Water Rates And Charges**

**7-4-1: WATER RATES AND CHARGES:**

A. Water Rates: Water rates per one thousand (1,000) gallons of water used for consumers of water supplied by the Village shall be as set forth below:

For all business or commercial uses	\$11.37
For all uses not otherwise provided including residential uses	\$11.29
For churches, schools and nonprofit institutions	\$10.63

Lead Service Line Inventory Template

Water System Name: Village of Worth System ID Number: IL0313360 Current Inventory Date: 03/26/2026 Previous Inventory Date: 4/15/2023 Has Funding Assistance Been Requested?: NO

Service Address	Is this a high-risk Facility or Area?	Service Line Newly Identified Since Last Submitted Inventory	Meter Type / Size	Year PWS-Owned Service Line was Installed	Year Customer Side Service Line was Installed	Source of Information Used for Service Line Identification	Gooseneck/Pigtail	PWS-Owned Service Line Material	Customer Side Service Line Material	Was Galvanized Service Line Material ever downstream of Lead?	Date Customer Notified of Lead Service Line	Was a Lead Service Line Previously Replaced at this Location?	Date Lead Service Line Replaced	Material of Service Line Replacement	Has the customer refused access to the property?	Date of customer waiver or IDPH notification, if customer refused access to property	30 CURRENT L/C SITE NUMBER
	EXAMPLER: Group Homes, Parks, Playgrounds, Special Care Facilities, Hospitals, Clinics, Child Care Facilities	Yes (Y) or No (N) Date		What year was the PWS-Owned service line installed, if known?	What year was the customer side service line installed, if known?	How was the Material of this Service Line Identified? EXAMPLER: Construction Records, Visual Inspections, Survey Response, Maintenance Records, etc....	EXAMPLER: Copper - No Lead Solder (C) Copper - Lead Solder (CL1) Galvanized (G) Lead (L) Cast/Ductile Iron or Transite (DI) Plastic - PVC, HDPE, PE-X (PE) Unknown (U) Unknown Not Lead (UNK)	EXAMPLER: Copper - No Lead Solder (C) Copper - Lead Solder (CL1) Galvanized (G) Galvanized Requiring Replacement (GRR) Lead (L) Cast/Ductile Iron or Transite (DI) Plastic - PVC, HDPE, PE-X (PE) Unknown (U) Unknown Not Lead (UNK)	EXAMPLER: Copper - No Lead Solder (C) Copper - Lead Solder (CL1) Galvanized (G) Galvanized Requiring Replacement (GRR) Lead (L) Cast/Ductile Iron or Transite (DI) Plastic - PVC, HDPE, PE-X (PE) Unknown (U) Unknown Not Lead (UNK)	If any galvanized service line material was ever downstream of a Lead section, mark Yes (Y). If the galvanized service line material was never downstream of any Lead section, mark No (N). / If Yes, that section of service line should be marked as Galvanized Requiring Replacement in the appropriate immediately preceding column(s).	Enter date customer was notified of Lead Service Line. / If Service Line is not Lead put N/R.	Yes (Y) or No (N)	If previous column was marked (Y), provide date the Lead Service Line was replaced. / Leave blank if previous column was (N).	EXAMPLER: Copper - No Lead Solder (C) Galvanized (G) Plastic - PVC, HDPE, PE-X (PE) Cast/Ductile Iron or Transite (DI) Leave blank if no Lead Service Line was replaced.	Yes (Y) or No (N)	If customer refused access to property, date waiver obtained by PWS or date PWS notified IDPH of refusal to sign waiver. / Leave blank if customer has not refused access.

Lead Service Line Inventory Template

Water System Name: Village of Worth System ID Number: IL0313360 Current Inventory Date: 03/26/2026 Previous Inventory Date: 4/15/2023 Has Funding Assistance Been Requested?: NO

Service Address	Is this a high-risk Facility or Area?	Service Line Newly Identified Since Last Submitted Inventory	Meter Type / Size	Year PWS-Owned Service Line was Installed	Year Customer Side Service Line was Installed	Source of Information Used for Service Line Identification	Gooseneck/Pigtail	PWS-Owned Service Line Material	Customer Side Service Line Material	Was Galvanized Service Line Material ever downstream of Lead?	Date Customer Notified of Lead Service Line	Was a Lead Service Line Previously Replaced at this Location?	Date Lead Service Line Replaced	Material of Service Line Replacement	Has the customer refused access to the property?	Date of customer waiver or IDPH notification, if customer refused access to property	30 CURRENT L/C SITE NUMBER
	EXAMPLER: Group Homes, Parks, Playgrounds, Special Care Facilities, Hospitals, Clinics, Child Care Facilities	Yes (Y) or No (N) Date		What year was the PWS-Owned service line installed, if known?	What year was the customer side service line installed, if known?	How was the Material of this Service Line Identified? EXAMPLER: Construction Records, Visual Inspections, Survey Response, Maintenance Records, etc....	EXAMPLER: Copper - No Lead Solder (C) Copper - Lead Solder (CLS) Galvanized (G) Lead (L) Cast/Ductile Iron or Transite (DI) Plastic - PVC, HDPE, PEK (PI) Unknown (U) Unknown Not Lead (UNK)	EXAMPLER: Copper - No Lead Solder (C) Copper - Lead Solder (CLS) Galvanized (G) Galvanized Requiring Replacement (GRR) Lead (L) Cast/Ductile Iron or Transite (DI) Plastic - PVC, HDPE, PEK (PI) Unknown (U) Unknown Not Lead (UNK)	EXAMPLER: Copper - No Lead Solder (C) Copper - Lead Solder (CLS) Galvanized (G) Galvanized Requiring Replacement (GRR) Lead (L) Cast/Ductile Iron or Transite (DI) Plastic - PVC, HDPE, PEK (PI) Unknown (U) Unknown Not Lead (UNK)	If any galvanized service line material was ever downstream of a Lead section, mark Yes (Y). If the galvanized service line material was never downstream of any lead section, mark No (N). If Yes, that section of service line should be marked as Galvanized Requiring Replacement in the appropriate immediately preceding column(s).	Enter date customer was notified of Lead Service Line. If Service Line is not Lead put N/R.	Yes (Y) or No (N)	If previous column was marked (Y), provide date the Lead Service Line was replaced. Leave blank if previous column was (N).	EXAMPLER: Copper - No Lead Solder (C) Galvanized (G) Plastic - PVC, HDPE, PEK (PI) Cast/Ductile Iron or Transite (DI) Leave blank if no Lead Service Line was replaced.	Yes (Y) or No (N)	If customer refused access to property, date waiver obtained by PWS or date PWS notified IDPH of refusal to sign waiver. Leave blank if customer has not refused access.

## **IMPORTANT INFORMATION ABOUT LEAD IN YOUR DRINKING WATER**

**The Community Water System (CWS) has determined that your property is likely serviced by a lead water pipe. Lead can cause serious health problems, especially for pregnant women and children 6 years and younger. Please read this notice closely to see what you can do to reduce lead in your drinking water.**

The CWS provides water that protects our residents from lead leaching into our water system. The CWS has not had a recent violation for lead levels. However, proper maintenance of the system to prevent the leaching of lead costs time, energy, and money. There is also the potential that something might go wrong and people with lead service lines would be exposed to lead in their drinking water.

### **Health Effects of Lead**

**It can cause damage to the brain and kidneys, and can interfere with the production of red blood cells that carry oxygen to all parts of your body. The greatest risk of lead exposure is to infants, young children, and pregnant women. Scientists have linked the effects of lead on the brain with lowered IQ in children. Adults with kidney problems and high blood pressure can be affected by low levels of lead more than healthy adults. Lead is stored in the bones and can be released later in life. During pregnancy, the child receives lead from the mother's bones, which may affect brain development.**

### Sources of Lead

The source of water from Lake Michigan does not contain lead. When water is in contact with service lines or plumbing that contains lead for several hours, the lead may enter drinking water. Homes built before the 1960s in our community are more likely to have lead service lines and lead in solder and plumbing fixtures.

Don't forget, most lead exposure is still from small children ingesting lead paint, dust, and soil. In addition, lead can be found in certain types of pottery, pewter, brass fixtures, food, and cosmetics. Other sources include exposure in the work place and exposure from certain hobbies (lead can be carried on clothing or shoes). Lead is found in some toys, some playground equipment, and some children's metal jewelry. Wash your children's hands and toys often as they can come into contact with dirt and dust containing lead.

### Steps That You Can Take to Reduce Your Exposure to Lead in Your Drinking Water

1. *Run your water to flush out lead.*
  - a. If the plumbing in your home is accessible; you may be able to inspect your own plumbing to

- determine whether you have a lead service line. Otherwise, you will most likely have to hire a plumber, or allow the Village to inspect your water line.
- b. If you do not have a lead service line, running the water for 1 - 2 minutes at the kitchen tap should clear the lead from your household plumbing to the kitchen tap. Once you have done this, fill a container with water and store it in the refrigerator for drinking, cooking, and preparing baby formula throughout the day.
  - c. If you do have a lead service line, flushing times can vary based on the length of your lead service line and the plumbing configuration in your home. The length of lead service lines varies considerably.
  - d. The following flushing guidelines are recommended by the American Water Works Association after a lead service line is replaced:
    - i. Find all the faucets that will drain, including the basement and all floors in your house.
    - ii. Remove aerators and screens whenever possible, including the shower heads, from all faucets you plan to flush.
    - iii. Include the laundry tubs, hose-bibs, bathtubs, and showers as flushing points.
    - iv. After all the aerators are off, open the faucets in the basement or lowest floor in the house. Leave all faucets running at highest rate possible, using cold water.
    - v. After the faucets are all open in lowest floor, open the faucets on next highest floor of the house. Continue until faucets are open on all floors.
    - vi. After all faucets are opened, leave the water running for at least 30 minutes.
    - vii. After 30 minutes, turn off the first faucet you opened and continue to turn off other faucets in the same order you turned them on.
    - viii. Clean aerators/screens at each faucet. You may need to replace screens/aerators if too old or worn
2. *Use cold water for drinking, cooking, and preparing baby formula.*
    - a. Do not cook with or drink water from the hot water tap; lead dissolves more easily into hot water.
    - b. Do not use water from the hot water tap to make baby formula.
  3. *Look for alternative sources or treatment of water.*
    - a. You may want to consider purchasing bottled water; or
    - b. Purchase a water filter that is certified to remove "total lead". The filter should be NSF 53 and NSF 42 certified.
  4. *Clean and remove any debris from faucet aerators on a regular basis.*
  5. *Do not boil water to remove lead.* Boiling water will not reduce lead.
  6. *Purchase lead free faucets and plumbing components.*
  7. *Remove the entire lead service line.*
    - a. *As part of the separate Lead Service Line Replacement program, should you agree to participate, the Village will replace your lead service line from the water main to the meter inside your home.*
  8. *Test your water for lead.*
    - a. Call us at: 815-412-2015 to find out how to get your water tested for lead. While we do not do the testing, we can provide a list of laboratories certified to do the testing. Laboratories will send you the bottles for sample collection. Please note that we are not affiliated with the laboratories, and they will charge you a fee.
      - If test results indicate a lead level above 15 ug/L, bottled water should be used by pregnant women, breast-feeding women, young children, and formula-fed infants.
    - b. Approximately one month after service line replacement, testing is recommended. The sample should be a first-draw sample after water has not been used for at least 6 hours. The sample must be collected from a tap used frequently inside the home, preferably from the kitchen.
    - c. As a precaution, until the sample is collected and analyzed, the customer is recommended to do a mini-flush of premise plumbing by running tap water each morning or when the water sits in the pipe for at least 6 hours. Flush for 5 minutes to displace water that has been sitting in the pipes inside the house and in the service line. This could include taking a shower, running the dishwasher, flushing a toilet, collecting water for plants/garden, or running the faucet. The customer should do this before using any

water for drinking, cooking, infant formula, and so on. Daily miniflushes should continue for six months or until lead sample results show the lead level is below the regulatory guideline. The customer should clean debris from aerators and screens once a month for six months. After six months, clean debris twice a year.

### **For More Information**

**Call the Worth Water Department at 708.448.4216 or visit our website at [www.villageofworth.com](http://www.villageofworth.com). For more information on reducing lead exposure around your home/building and the health effects of lead, visit EPA's website at [www.epa.gov/lead](http://www.epa.gov/lead) or contact your health care provider.**

Thank you for reading this notice, and we hope to hear from you soon.
